Internship – Angular UI test engineer

In which team will you work?

Bravo! This is the name of the team that explains everything 😵. We are a young team, a diverse team regarding seniority and technologies. Our bread and butter are a creative job as well as maintenance tasks. The team already has number of ex-interns who became our permanent full and part-time team members and are ready to guide new colleagues through their internship experience.

What will be your daily agenda?

- Page migration between different angular versions. It is a real UI work on a real, live product.
- Writing functional E2E tests in C#
- Reproduce customer issues up to 25% of the time

Your Impact:

- Collaborate with outstanding software engineers from around the world.
- In this role, you will learn how to drive the analysis and implementation of new and existing software features.

- Assist with customer issue resolution, root cause analysis, and defect prevention.
- Develop testable, production-quality code under the supervision and tutelage of highly experienced software engineers.
- Learn through experience by consulting with teammates on high-visibility projects.
- Help define and deliver valuable, usable, and automatically testable user stories.

Your Experience:

- Should have some experience with Angular and C# .NET
- Nice to have some experience with ASP.NET, HTML5, JavaScript, JQuery, SQL, etc.
- Has excellent verbal and written communication skills.
- Shows a desire to follow industry best practices in analyzing and developing solutions to complex computing problems.
- Has a passion for learning and keeping up to date with the latest technologies and design concepts.
- Concerns themselves with writing testable code for both customer-facing and non-customer-facing systems.
- Demonstrates creativity and high engagement in brainstorming new ideas and solutions
