Programmed Grammar

Programmed Grammar

A programmed grammar is a pair

$$H = (G, R)$$

where

- $G = (N, T, P, S)$ is a context-free grammar
- R is a finite relation on P

Notation

If $p : A \to x \in P$, $R(p) = Q$, we write

$$(p : A \to x, Q)$$

Generated Language

Derivation Step

For $(x, p), (y, q) \in V^* \times P$,

$$(x, p) \Rightarrow (y, q) \text{ in } H$$

if

1. $x \Rightarrow y\ [p]$ in G
2. $q \in R(p)$

Generated Language

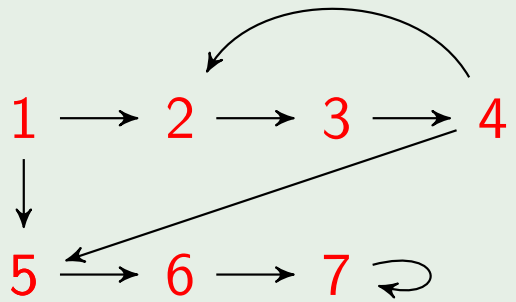
$$L(H) = \{x \in T^* : (S, p) \Rightarrow^* (x, p') \text{ for some } p, p' \in P\}$$

Programmed Grammar – Example

Example

$(1 : S \to ABC, \{2, 5\})$
$(2 : A \to aA, \{3\})$
$(3 : B \to bB, \{4\})$
$(4 : C \to cC, \{2, 5\})$
$(5 : A \to a, \{6\})$
$(6 : B \to b, \{7\})$
$(7 : C \to c, \{7\})$

$$
\begin{aligned}
(S, 1) &\Rightarrow (ABC, 2) \\
&\Rightarrow (aABC, 3) \\
&\Rightarrow (aAbBC, 4) \\
&\Rightarrow (aAbBcC, 5) \\
&\Rightarrow (aabBcC, 6) \\
&\Rightarrow (aabbcC, 7) \\
&\Rightarrow (aabbcc, 7)
\end{aligned}
$$



$$L(H) = \{a^n b^n c^n \ : \ n \geq 1\}$$

Programmed Grammar with Appearance Checking

Programmed Grammar with Appearance Checking

A programmed grammar with appearance checking is a triple

$$H = (G, R, F)$$

where

- $G = (N, T, P, S)$ is a context-free grammar
- R, F are finite relations on P

Notation

If $p : A \to x \in P$, $R(p) = Q$, and $F(p) = H$, we write

$$(p : A \to x, Q, H)$$

where Q and H are success and failure fields, respectively

Derivation Step

Derivation Step

For $(x, p), (y, q) \in V^* \times P$,

$$(x, p) \Rightarrow (y, q) \text{ in } H$$

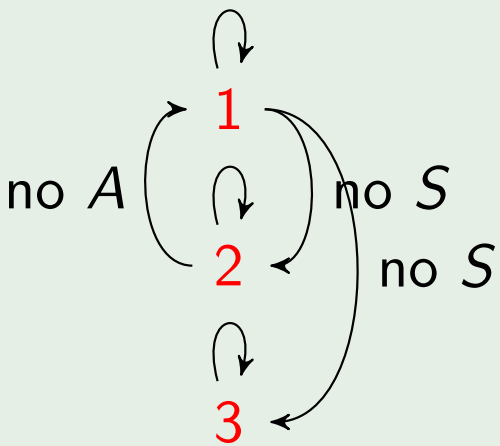
if

- either $x \Rightarrow y\ [p]$ in G and $q \in R(p)$
- or $x = y$, $q \in F(p)$, p is not applicable to x

Example I

Example

$(1 : S \to AA, \{1\}, \{2, 3\})$
$(2 : A \to S, \{2\}, \{1\})$
$(3 : A \to a, \{3\}, \emptyset)$



$L(H) = \{a^{2^n} : n \geq 1\}$

$(S,1) \Rightarrow (AA,1) \Rightarrow (AA,3)$
$\Rightarrow (Aa,3)$
$\Rightarrow (aa,3)$
$\Rightarrow (AA,2)$
$\Rightarrow (AS,2)$
$\Rightarrow (SS,2)$
$\Rightarrow (SS,1)$
$\Rightarrow (SAA,1)$
$\Rightarrow (AAAA,1) \Rightarrow (AAAA,3)$
$\Rightarrow (AaAA,3)$
$\Rightarrow (AaaA,3)$
$\Rightarrow (aaaA,3)$
$\Rightarrow (aaaa,3)$
$\Rightarrow (AAAA,2)$
$\Rightarrow (ASAA,2) \ldots$

Example II

Example

$$(1 : S \to SC, \{1, 2\}, \emptyset)$$
$$(2 : S \to AA, \{3\}, \emptyset)$$
$$(3 : A \to B, \{4\}, \{5\})$$
$$(4 : C \to D, \{3\}, \{7\})$$
$$(5 : C \to C, \{6\}, \emptyset)$$
$$(6 : B \to A, \{6\}, \{3\})$$
$$(7 : B \to A, \{7\}, \{8\})$$
$$(8 : D \to A, \{9\}, \{10\})$$
$$(9 : D \to C, \{9\}, \{3\})$$
$$(10 : A \to a, \{10\}, \emptyset)$$

Which language generates this grammar?
