

RDF4J Class Builder

Ontology-based Java class generator

Installation Guide

Radek Burget

rdf4j-class-builder Installation Guide

Using the Precompiled Application

RDF4J Class Builder is distributed as platform-independent runnable jar archive:

- Download the runnable archive `ClassBuilder.jar` from [Releases](#)
- Run the following command in the command prompt (depending on your operating system):

```
java -jar ClassBuilder.jar
```

You should see a list of available parameters.

Building from Sources

RDF4J Class Builder may be build from the sources by maven. After cloning the source repository, use `mvn package` for building and packaging all the components. The created packages will be available in the `target` folder.

Acknowledgements

This work was supported by the Ministry of the Interior of the Czech Republic as a part of the project Integrated platform for analysis of digital data from security incidents VI20172020062.
